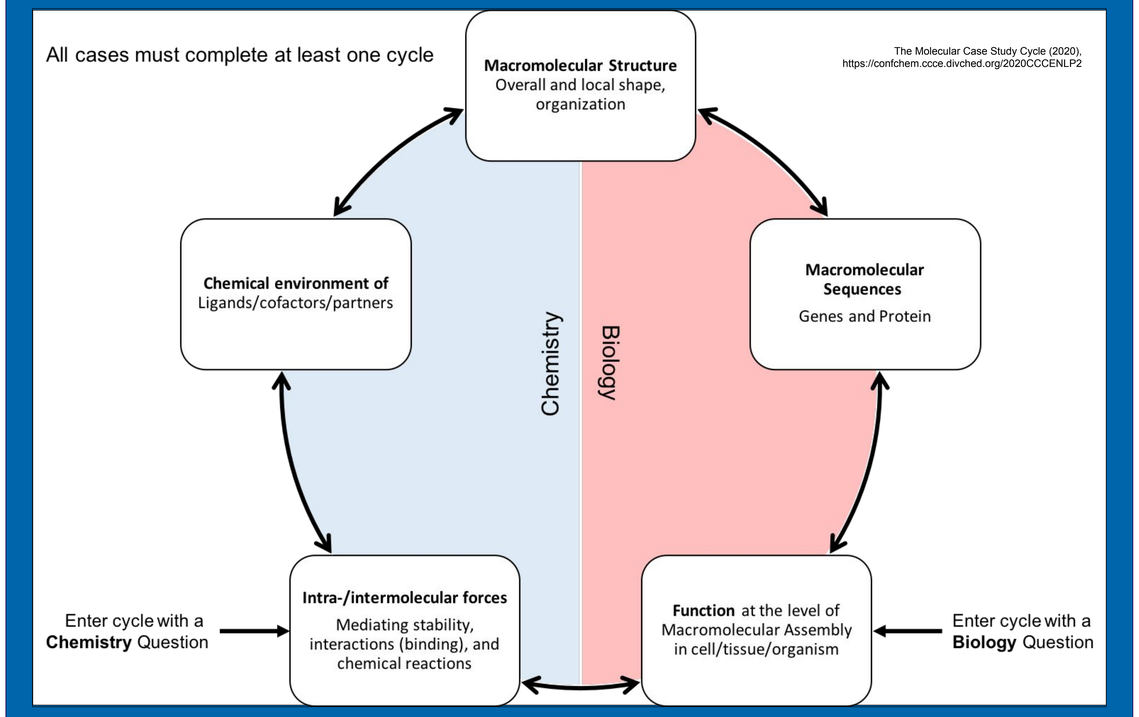
A Community of Educators and Scholars, Developing and Using **Molecular Case Studies at the Interface of Biology and Chemistry**

Shuchismita Dutta
RUTGERS

What is a Molecular Case Study?

These case studies provide opportunities for telling molecular stories to engage students in exploring biomolecular structure and function. Each molecular case study (MCS) completes at least one MCS cycle (shown above) and includes

- **a hook** (such as a video, narrative, image, or report), to engage and present the case context
- guidance to **identify key molecular players** in the story and find relevant 3D structures to study
- guidance for **molecular visualization and analysis** of case theme related 3D structures
- opportunities to **integrate information** from the literature, bioinformatics resources, and connect with biomolecular structure and function to synthesize new knowledge or perspectives.



Where can you find MCSs?

- Browse molecular case studies at Molecular CaseNet (molecular-casenet.rcsb.org).
- Educators can request for a free account and password to access answer keys and teaching notes.
- Adopt and adapt case studies to meet your curricular needs.
- Adaptations of MCSs are available for use at https://qubeshub.org/community/groups/molcasenet

Funding

- Supported by the National Science Foundation awards NSF DBI-1827011 and 2018884.
- MCSs are published as open education resources using the QUBES hub

Why consider using MCSs?

They provide opportunities to practice:

- query, navigation, and integration of information from various public bioinformatics resources,
- visualization and analysis of biomolecular structures,
- exploring the molecular basis of biological phenomena
- examination of biomolecular structures for in-depth understanding of intra- and inter-molecular forces in proteins, nucleic acids and their complexes facilitating their functions.

They can help students in:

- understanding real world problems, and
- developing STEM based solutions at the interface of biology & chemistry.

They are:

- modular, flexible, and adaptable,
- active learning opportunities,
- accompanied by answer keys and teaching notes, and
- opportunities to apply multidisciplinary concepts learned in class to authentic societal issues.

Molecular CaseNet invites you to

- **Explore** published Molecular Case Studies and use ones that meets your course objectives and curricular goals.
- **Adapt** published MCSs to meet your specific curricular needs and share these adaptations.
- **Author** a Molecular Case Study independently or collaboratively about a topic of your choice. A new cohort starts in Fall (September /October).
- **Engage your students** in authoring molecular case studies as a partial Course based Undergraduate Research Experience (CURE)
- **Pilot** 'Molecular Case Studies for Field Testing' and provide feedback to the authors
- **Join the Molecular CaseNet Review Committee** to help review Molecular Case Studies
